Chapter 1

The first chapter

Text goes here.

1.1 SECTION

Hello world. We start with a definition:

Definition 1 (Group). A group is a set S along with an operation $\circ$ with four axioms: identity, associativity, closure and inverse.

Theorem 1 (Pytagorean theorem). *For a triangle with sides a, b and c, it is true that $a^2 + b^2 = c^2$.*

Proof. Here comes the proof... □

Look closely at theorem 1, in other words theorem (1). Here is a list:

- But if the rebellion is to be successful.

- not to between two, it is necessary.

- think that there is no.

Another list:

1. think that there is no.

2. When a rational conviction has.

3. in oneself whatever.

$$T = \frac{1}{2}mv^2 \tag{1.1}$$
